
Education

Bachelor of Science in Information technology
Stamford International University | Nov 2022 – December 2025
Major: Information Technology | GPA 3.78 / 4

Working Experience

Software Engineer Intern at Omise
| June 2025 - December 2025

PERSONAL PROJECT & TEAM PROJECT

Cash Wise: ([GitHub](#))

- Built with **Next.js**, **ShadCN**, and **Aceternity**; used **React Query** for fetching data, caching, and synchronization, leading to a more efficient and maintainable codebase and **Zustand** for state management to keep the frontend predictable and maintainable.
- Backend developed in **Go (Fiber)** with **GORM** for managing **PostgreSQL** and containerized with **Docker** for easy deployment.
- Implemented **OAuth** login with **JWT** session handling in the backend, enabling persistent authentication across sessions
- **Deployed on Vercel** for production with CI/CD integration; also **tested local deployment with Kubernetes** to ensure container orchestration, scalability, and reliability in different environments..

Style-War (Team Project): ([GitHub](#))

- Frontend built with **Next.js** and **Mantine** UI library to create a dynamic and responsive UI.
- Backend in **Go (Gin)** for API server and real-time handling using **webSockets**, enabled multiplayer logic and match tracking
- **Clerk** for secure user authentication and used **GORM** with **PostgreSQL** for data storage ensuring data handling during CSS battles.

AI-Clipboard-Extension: ([GitHub](#))

- Build with **Plasmo** which offer support for **React** for cross-browser compatibility with Chrome & Firefox extensions.
- Integrated **LLaMA 3.3** model via **Cloudflare AI Workers** to generate contextual summaries and answers.
- Used **Cloudflare Workers** with **Hono** for backend logic and clipboard update handling.

TTT-online (Team Project): ([GitHub](#))

- **Socket.io** for Real-time multiplayer, keeping a live connection open so moves appear instantly on both screens.
- Frontend built with **Next.js**, styled with **Mantine UI** and **TailwindCSS** for a fast, responsive interface.
- Backend **Bun** with **Hono**, **Socket.io** for real-time game logic, managing rooms, players, and turns in memory using JavaScript Maps.
- **Session management** handles, players can reconnect mid-game and automatically restore their role X or O, board state, and score.

Kalifinder (search widget plugin for shopify and wordpress website) (Team project):

- Built a Shopify and WordPress product sync pipeline with idempotent upserts, safely handling retries without creating duplicates.
- **OpenSearch** as a Query Engine to support full-text search, faceted filtering, and k-NN vector similarity in one round-trip.
- Integrated **AWS Bedrock** image embedding models to convert product images into vectors and power similarity search, enabling “find similar products” without hosting any ML infrastructure.
- **JWT + Cognito Auth** stateless, horizontally scalable authentication for vendors and shoppers.
- **Amazon S3** presigned URLs to allow direct uploads from clients, reducing backend load and bottlenecks.
- Async Embedding using **AWS SQS** image embeddings run in background workers instead of blocking sync
- Deployed both frontend and backend on **ECS Fargate**, leveraging serverless container orchestration and auto-scaling.
- Hosted the React search widget as an embeddable script on **AWS S3** and distributed it globally via Amazon **CloudFront**.
- **Terraform** for IaC manages all **AWS** resources (**Fargate**, **OpenSearch**, **S3**) as code. Version-controlled, reproducible infra

SKILLS

Frontend:

- **Next.js** | **Vite-React** | **HTML** | **CSS** | **Tailwind CSS** | **Vue**

Backend:

- **Go Fiber** | **Express** | **Hono** | **Elysia** | **Gin** | **Socket.io**

Database:

- **PostgreSQL** | **MySQL** | **MongoDB** | **Cloudflare D1** | **Firebase**

Languages:

- **Go** | **Typescript** | **JavaScript** | **JAVA** | **Python** | **SQL**
PHP | **Ruby**

Cloud & DevOps:

- **Git** | **Docker** | **Vercel** | **render** | **cloudflare**
| **AWS (EC2, Lambda, LightSail, ECS, S3, cloudfront)** |
GitHub actions | **Kubernetes**

API & Communication:

- **REST API** | **Websocket** | **GraphQL** | **gRPC** | **tRPC**

Testing:

- **Jest** | **Vitest** | **Playwright** | **Go stdlib test**

AI & Messaging Systems:

- **Cloudflare AI Worker** | **Kafka** | **RabbitMQ**
| **Amazon SQS** | **Amazon Bedrock**

Tools & Integrations:

- **GORM** | **Prisma** | **Omise** | **Stripe** |
| **Clerk** | **LaunchDarkly** | **buildkite** | **SonarQube**

Testing Analytics & Search & Visualization:

- **Elasticsearch** | **AWS OpenSearch** | **Kibana** |
Amazon QuickSight | **Mixpanel**

EXTRA-CURRICULAR ACTIVITIES

DOCKER Workshop – Stamford International University | Technical Assistant

- With the coding club we organized a workshop at Stamford University with a theory and practical session.

HTML CSS JS Workshop - Stamford International University | Speaker and Technical Assistant

- Organized Basic of how HTML, CSS, and Javascript work to render on the website and show case of how it's work all together by coding.

STYLE-WAR: CSS Battle Workshop – Stamford International University | Frontend Team

- Host a CSS Battle competition in collaboration with the coding club team which received significant recognition from the event's success.
